

24v Door Proximity Sensor – 12.5mm ø – 2m Cable

Variant code: LSS2408IR

Infra-red proximity sensor wired with 2000 mm cable for recessed or surface mounted installation.

The LSS2408IR sensors connected to the control unit with standard setup activate the gradual turning on and off of lighting fixtures in soft-on and soft-off mode (fade 2.5?) with the opening and closing of doors. The control unit integrates an automatic switch-off function that triggers the shutdown after continuous operation for 20 minutes.

By opening even just one of the doors in the rear compartments where a sensor has been installed, all lighting fixtures connected are turned on. Turning off occurs with the closing of all doors.

The sensor can be installed recessed or surface-mounted with the provided standard support. It is possible to modify the setup simply by pressing the button on the control unit. With one press, the ON-Off and dimmer function of the LSS2408IR sensors is activated. With a subsequent press, the factory setup of the LSS2408IR is restored.
