

24v Door Proximity Sensor – 14mm Ø – 2m Cable

Variant code: LDX24IR

Door Proximity Sensor for Smart Power Supply.

LDX24IR automatically switches on and off luminaires connected to the Smart Power Supply when the door, on the back of which it is installed, is opened or closed.

In addition to recessed installation in a 10 mm hole it can also be installed “flush to the door” thanks to the special sensor design with rear diodes.

LDX24IR is supplied with a 2000 mm cord and must be connected to the Smart Power Supply via a distributor LPX2403 (supplied separately) used to increase the dedicated outputs to a maximum of 6.
