

24v PIR Motion Sensor – 20.5mm ø – 2m Cable

Variant code: LSS2408PIR

Infra-red pyrolytic movement sensor wired with 2000mm cord for recessed installation.

The LSS2408PIR sensors connected to the control unit with standard setup activate the gradual turning on and off of lighting fixtures in soft-on and soft-off mode (fade 2.5?) with the opening and closing of doors. In the absence of movements within the detection area, after approximately 180 seconds, the fixtures automatically turn off even with the door open.

Turning on occurs by opening any of the doors, while for turning off, it is necessary for all doors to be closed.
