Door Straightener, Adjustable - Surface Mount/Fully Recessed & Cuttable - 2300mm

Variant code: ADS06230

Door Straightener, Adjustable - Surface Mount/Fully Recessed & Cuttable is a premium concealed reinforcement system designed to prevent bowing and warping in both **sliding and hinged doors**. Offering exceptional installation flexibility, this versatile straightener can be fitted in **fully recessed, semi-recessed or surface-mounted** configurations, making it suitable for everything from luxury bespoke joinery to demanding commercial applications. Engineered as one of the **strongest door straighteners in the Sugatsune range**, it delivers reliable long-term door stability while preserving the appearance of premium furniture.

For high-end cabinetry, the straightener can be fully morticed into the door, covered with the supplied cap and veneered over to create a completely seamless finish. Alternatively, it can be installed semi-recessed or surface mounted to suit different manufacturing methods and project requirements. All adjustments are carried out from either the **top or bottom of the door using an Allen key**, allowing convenient post-installation correction without removing the door. The latest **adjustable-length version** can be shortened by up to **420mm**, providing excellent flexibility across a range of door heights.

Designed for cabinet makers, furniture manufacturers and architectural joiners, the Sugatsune Adjustable Door Straightener provides a robust solution for controlling door movement in challenging applications. As door performance depends on material, thickness and construction, a **trial application is recommended** before production installation.

Product Features

- Heavy-duty adjustable door straightener
- Suitable for sliding and hinged doors
- Three installation options: fully recessed, semi-recessed or surface mounted
- Fully concealed installation possible beneath veneer
