

Blum Angled Spacer Plate – +5° Obtuse – Nickel – 0.8mm

Variant code: 171A5010

Blum Angled Spacer Plate – +5° Obtuse – Nickel is designed to support accurate hinge positioning where cabinet construction requires angular correction. Manufactured by **Blum**, a global leader in precision cabinet hardware, this spacer plate integrates with compatible **Blum CLIP top hinge systems** to ensure reliable hinge performance and precise door alignment in specialised cabinet configurations.

The spacer plate provides a **+5° obtuse angle**, allowing hinges to be correctly positioned when installing doors on angled cabinet sides or diagonal cabinet constructions. By compensating for cabinet geometry, it helps maintain consistent hinge movement and accurate door positioning, ensuring smooth operation and balanced door gaps.

Manufactured from durable **nickel-plated steel**, the spacer plate offers strength, corrosion resistance and a neutral appearance suitable for most cabinet interiors. Its compact design allows straightforward installation between the hinge and cabinet surface, integrating seamlessly within the Blum hinge system while maintaining full hinge functionality and adjustment capability.

Product Features

- **+5° obtuse angled spacer plate** for specialised cabinet installations
- Designed for use with **Blum CLIP top hinge systems**
- Helps achieve correct hinge positioning on angled cabinet constructions
- Durable **nickel-plated steel construction**
- Compact design integrates with standard hinge installations

Product Benefits

- Allows accurate hinge installation on angled cabinet sides
- Supports precise door alignment and consistent reveals
- Maintains smooth hinge movement in specialised cabinet layouts
- Improves installation accuracy in custom

cabinetry

- Suitable for residential and light commercial furniture applications

Technical Characteristics

- **+5° obtuse angle** spacer configuration
- Steel construction with **nickel-plated protective finish**
- Compatible with **Blum CLIP top hinge systems**
- Designed for integration within Blum cabinet hardware systems

Applications

This spacer plate is intended for **cabinet installations where hinge mounting requires angular correction**, such as angled cabinet sides, diagonal cabinetry and bespoke furniture constructions. The **+5° obtuse configuration** enables correct hinge positioning, ensuring smooth door operation and accurate alignment in specialised cabinet layouts commonly used in kitchens, fitted furniture and custom joinery.
