

Blum Aventos HK Top Servo-Drive Switch – Deep Grey

Variant code: 23P5020

Blum AVENTOS SERVO-DRIVE switch is a control component designed to activate electrically assisted opening for AVENTOS HK top lift systems. As part of Blum's SERVO-DRIVE technology, this switch enables convenient touch activation, allowing cabinet fronts to open effortlessly with a light press. Blum is globally recognised for precision-engineered cabinet hardware, and this component reflects the brand's focus on user comfort, system integration and reliable performance.

Specifically developed for the AVENTOS HK system, the switch works in conjunction with the SERVO-DRIVE motor pack and power supply to deliver smooth and consistent operation. When installed in the cabinet, it detects user input and triggers the drive unit to open the lift mechanism. Its compact and discreet design allows it to be integrated seamlessly within cabinetry without affecting storage space or cabinet aesthetics. The switch is engineered to provide consistent responsiveness while maintaining compatibility across the Blum SERVO-DRIVE system.

Product Features

- Designed for **Blum AVENTOS SERVO-DRIVE HK systems**
- **Touch-activated switch** for opening control
- Enables **electrically assisted opening functionality**
- Compatible with Blum **SERVO-DRIVE motor pack and power supply**
- Compact design for **discreet cabinet integration**
- Provides **consistent activation response**
- System-matched component for reliable performance

Product Benefits

- Enables effortless cabinet opening with a light touch
- Supports **handle-less cabinet design**
- Improves user convenience and accessibility

- Ensures reliable communication between user input and drive unit
- Integrates seamlessly within the Blum system
- Suitable for modern residential and light commercial interiors

Technical Characteristics

- Designed for use with **AVENTOS HK SERVO-DRIVE systems**
- Requires compatible Blum **motor pack and power supply unit**
- Must be installed as part of a **complete SERVO-DRIVE system**
- Intended for **internal cabinet installation**
- Compatible with Blum **cable and distribution components**
- Installation should follow Blum **technical guidelines and instructions**

Applications

This switch is intended for use in AVENTOS HK top lift system installations where electrically assisted opening is required. It is commonly used in wall cabinets within kitchens, fitted furniture and modern cabinetry projects where handle-less design and ease of use are priorities. By enabling touch activation of the SERVO-DRIVE system, it contributes to a seamless user experience while maintaining clean cabinet aesthetics and reliable system performance.
