Blum Aventos HS Top Lever Arm Set - Cabinet Height 350- 800mm

Variant code: 22S3500

Blum AVENTOS HS Lift System - Top Lever Arm Set is designed to facilitate smooth and controlled movement of lift-up cabinet doors within the AVENTOS HS system. Manufactured by **Blum**, a globally recognised specialist in cabinet motion technology, this lever arm set works in conjunction with the lift mechanism to guide the door through its opening and closing motion, ensuring stable and consistent performance.

The lever arms enable cabinet fronts to open in a sweeping upward motion, positioning the door above the cabinet to provide clear and unobstructed access to internal storage. This motion characteristic is particularly suited to larger cabinet fronts, where controlled movement and balanced operation are essential for both usability and safety.

Designed specifically for integration with the **Blum AVENTOS HS lift system**, the lever arm set ensures synchronised movement between components, contributing to smooth operation and accurate door alignment. Precision-engineered construction supports reliable long-term use while maintaining consistent motion performance across repeated opening and closing cycles.

Product Features

- Designed for **Blum AVENTOS HS lift systems**
- **Top lever arm set** for controlled lift-up motion
- Enables sweeping upward door movement
- Supports stable operation of large cabinet fronts
- Ensures synchronised movement with lift mechanism
- Precision-engineered for consistent performance
- Compatible with AVENTOS HS system components

Product Benefits

Tel: 01626 333900
Email: info@swshardware.com

- Provides smooth and controlled cabinet door movement
- Improves accessibility to overhead storage areas
- Supports safe operation of larger cabinet doors
- Maintains accurate door alignment during use
- Enhances overall lift system performance
- Integrates seamlessly within Blum lift systems

Technical Characteristics

- Designed for use with **Blum AVENTOS HS lift mechanisms**
- Required for proper operation of lift-up cabinet systems
- Ensures synchronised motion between lift components
- Engineered for precise installation and alignment
- Compatible with standard AVENTOS HS configurations
- Durable construction for long-term reliability

Applications

This lever arm set is intended for **AVENTOS HS lift-up cabinet systems** used in kitchens, storage units and fitted furniture where large overhead cabinet doors are installed. It enables smooth and controlled upward door movement, ensuring reliable operation and clear access to cabinet interiors. The component is essential in achieving balanced performance and precise alignment in lift systems designed for modern cabinetry.

Property	Value
Finish	Nickel Plated
Material	Steel
