Blum Modul Clip Top Cover Cap - Cranked/Double Cranked Hinge Arm - Nickel

Variant code: 90M2603

Blum MODUL Cover Cap - Cranked / Double Cranked Hinge Arm - Nickel is designed to provide a clean and professional finish to cabinet hinge installations by concealing the hinge arm on compatible **Blum MODUL cranked and double cranked hinges**. Manufactured by **Blum**, a globally recognised specialist in cabinet hardware, this cover cap improves the visual appearance of cabinet interiors while maintaining full compatibility with the **Blum MODUL hinge system** used across a wide range of cabinet constructions.

The cover cap fits securely over the **cranked or double cranked hinge arm**, neatly covering exposed hinge components to create a streamlined and refined cabinet interior. By concealing the hinge arm mechanism, it enhances the overall presentation of cabinet hardware and contributes to a more polished internal cabinet finish, particularly in cabinetry where hinge components remain visible when the cabinet door is opened.

Designed for efficient installation, the cap **clips directly onto the hinge arm** without the need for tools or additional fixings. This enables installers to complete hinge installations quickly while still allowing access to hinge components for adjustment or maintenance when required. As part of the **Blum MODUL hinge system**, the cover cap integrates seamlessly with compatible hinges, ensuring a consistent and professional hardware installation.

Finished in **Nickel**, the cover cap coordinates with standard nickel-plated hinge hardware, helping maintain a consistent cabinet interior appearance. The durable construction is designed to withstand regular cabinet use while maintaining its appearance and secure fit.

Product Features

- Designed for **Blum MODUL cranked and double cranked hinge arms**

SWS HARDWARE

Applications

This cover cap is used to complete **Blum MODUL hinge installations** in kitchens, wardrobes, storage cabinets and fitted furniture where a clean and professional cabinet interior is required. By covering the hinge arm mechanism, it improves the visual finish of cabinet hardware while maintaining full hinge functionality. It is commonly specified in **residential and commercial joinery projects**, including kitchens, bedroom furniture and office storage systems where coordinated cabinet hardware and refined finishing details are important.
