Blum Clip Top - 86° Opening Angle Restrictor for 110° Hinge -Black

Variant code: 70T3553

Blum CLIP top Opening Angle Restrictor - 86° for 110° Hinge - Black is designed to limit the opening angle of compatible **Blum CLIP top 110° hinges**, helping to protect adjacent cabinetry, walls and internal fittings from contact during door operation. Manufactured by **Blum**, a global specialist in precision cabinet hardware, this restrictor provides a simple and effective way to control door movement within cabinet installations.

The restrictor reduces the hinge opening from the standard **110° to approximately 86°**, preventing doors from opening too far in installations where space is limited or where nearby surfaces may be at risk of damage. It installs directly into the hinge arm, integrating neatly within the hinge mechanism without affecting normal hinge function or adjustment.

Manufactured from durable **engineered plastic with a black finish**, the restrictor is designed for reliable performance and discreet integration with compatible hinge systems. Once installed, it maintains the hinge's normal operation while limiting the maximum opening angle to improve installation safety and cabinet longevity.

Product Features

• **Opening angle restrictor** for Blum CLIP top hinges
• Limits hinge opening to **approximately 86°**
• Designed for use with **110° Blum CLIP top hinges**
• Compact component integrates directly within the hinge arm
• Durable **black engineered plastic construction**

Product Benefits

• Prevents cabinet doors from opening too far
• Helps protect **adjacent cabinets, walls and internal fittings**
• Improves safety in tight installation spaces
• Maintains smooth hinge operation and adjustment
• Quick and simple installation within the hinge arm

Technical Characteristics

- Compatible with **Blum CLIP top 110° hinges**
- Restricts hinge opening to **approximately 86°**
- Manufactured from **durable engineered plastic**
- **Black finish** for discreet integration
- Designed for integration within Blum hinge systems

Applications

This opening angle restrictor is used in **cabinet installations where door opening must be controlled**, such as cabinets positioned close to walls, appliances or neighbouring furniture. By limiting the hinge opening to **86°**, it helps prevent door impact and protects surrounding surfaces, making it suitable for kitchens, fitted furniture and bespoke cabinetry projects.
