

Blum Clip Top – 92° Opening Angle Stop for 155° Wide Angle Hinge

Variant code: 70T7553.09

Blum Clip Top – 92° Opening Angle Stop for 155° Wide Angle Hinge is designed to limit the opening range of compatible Blum CLIP top 155° wide-angle hinges where tighter door control is required. Manufactured by **Blum**, a globally recognised specialist in precision cabinet hardware, this accessory helps manage door movement in cabinetry installations where a full hinge opening may cause interference with adjacent cabinets, walls, appliances or internal storage systems.

The restrictor integrates directly into the hinge mechanism and reduces the maximum opening angle of the hinge from **155° to approximately 92°**. By limiting the door travel, it prevents cabinet doors from opening too far and contacting nearby surfaces or fittings. This helps protect cabinetry components while maintaining the smooth and reliable movement expected from the Blum CLIP top hinge system.

Designed specifically for **Blum CLIP top 155° wide-angle hinges**, the restrictor fits discreetly within the hinge assembly without affecting hinge alignment, installation or adjustment capability. The compact insert design allows simple installation either during hinge assembly or when retrofitting existing hinges where reduced door opening is required.

Manufactured from durable engineered material, the restrictor maintains the long-term performance and reliability associated with Blum cabinet hardware systems while providing additional control over cabinet door movement.

Product Features

- Opening angle restrictor for **Blum CLIP top 155° wide-angle hinges**
- Reduces hinge opening from **155° to approximately 92°**
- Compact insert designed for integration within the hinge mechanism
- Helps control cabinet door movement
- Quick installation during hinge assembly

- or retrofit
- Durable engineered construction for long-term use

Product Benefits

- Prevents cabinet doors from over-opening
- Protects adjacent cabinets, walls and internal fittings
- Improves control of door movement in tight installations
- Maintains smooth hinge operation
- Allows simple retrofit to existing hinge systems
- Supports long-term durability of cabinet components

Technical Characteristics

- Compatible with **Blum CLIP top 155° wide-angle hinges**
- Restricts hinge opening angle to approximately **92°**
- Installs directly within the hinge mechanism
- Does not affect hinge adjustment capability
- Engineered for integration within Blum cabinet hardware systems
- Suitable for both new installations and retrofit applications

Applications

This opening angle restrictor is used in cabinetry where **Blum CLIP top 155° wide-angle hinges** are installed but door opening must be limited to prevent interference with surrounding cabinetry or internal fittings. It is commonly specified in kitchens, wardrobes and fitted furniture where nearby cabinets, appliances or pull-out storage systems require controlled door movement. By restricting the hinge opening angle, the accessory helps protect adjacent components while maintaining reliable hinge performance.

Property	Value
Opening angle (°)	92
