

Panel Removal Tool with Hook

Variant code: CT-05H

Panel Removal Tool with Hook is a specialist installation tool designed for the quick and controlled removal of panels fitted with **Fastmount Low Profile concealed fixing systems**. Featuring an integrated hook design, the CT-05H allows installers and maintenance teams to easily engage and release concealed clips while minimising the risk of damage to panels or surrounding finishes. It is an essential accessory for professional panel installation, servicing and refurbishment projects.

Manufactured from durable, high-quality materials, the CT-05H is engineered for repeated professional use across commercial, marine, transport and architectural applications. The hooked tip provides improved access behind panels, making it easier to disengage concealed clips where space is limited. Designed specifically for the Fastmount Low Profile range, the tool enables panels to be removed and refitted quickly, supporting efficient maintenance and future access without compromising the integrity of the fixing system.

As part of the award-winning Fastmount installation tool range, the CT-05H complements the concealed panel mounting system that has transformed modern panel installation by allowing panels to be removed and reinstalled repeatedly in any sequence.

Product Features

- Genuine Fastmount CT-05H panel removal tool
- Integrated hook for easy panel engagement
- Designed for Fastmount Low Profile clip systems
- Allows safe removal of concealed panels
- Durable professional-grade construction
- Suitable for repeated installation and maintenance work
- Compact design for improved access in confined spaces
- Designed for fast, controlled panel removal

Product Benefits

- **Hooked design provides easy access behind concealed panels**
- **Allows panels to be removed quickly without damaging Fastmount clips**
- **Supports repeated removal and refitting for maintenance and servicing**
- Improves efficiency during installation and refurbishment projects
- Professional-quality construction ensures long service life
- Designed specifically for Fastmount Low Profile systems
- Reduces maintenance downtime by enabling rapid panel access
- Provides controlled, reliable operation in demanding environments

Technical Characteristics

- Product Type: Panel Removal Tool
- Model: CT-O5H
- Brand: Fastmount
- Design: Hooked Removal Tool
- Compatible System: Fastmount Low Profile Range
- Application: Concealed Panel Removal and Maintenance
- Construction: Professional-Grade Durable Materials

Applications

The **Fastmount CT-O5H Panel Removal Tool** is ideal for **architectural wall and ceiling panels, marine interiors, transport fit-outs, exhibition displays, retail installations, hospitality projects, modular panel systems and commercial joinery**. Designed for use with the **Fastmount Low Profile concealed fixing system**, it enables fast, safe removal and refitting of panels, making routine maintenance, inspections and future access simple and efficient.
