Sugatsune Damper Catch for Heavy Duty Doors up to 40 KG - White

Variant code: ACH09700WH

Sugatsune Damper Catch for Heavy Duty Doors up to 40 kg is designed to provide controlled and quiet closing performance for cabinet doors where additional damping is required. Manufactured by **Sugatsune**, a globally recognised specialist in precision architectural and furniture hardware, this damper catch enhances user experience by reducing impact noise and preventing abrupt door closure in demanding applications.

Engineered for **heavy duty cabinet doors**, the damper mechanism absorbs closing force to ensure smooth and controlled door movement. This helps protect cabinet structures, hinges and door materials from repeated impact, contributing to improved longevity and consistent performance over time.

The unit operates independently of the hinge, making it suitable for use with **unsprung hinges or applications requiring supplementary damping**. It can also be used to enhance existing hinge systems where integrated soft-close is not present. The compact design allows for discreet installation within the cabinet, maintaining a clean and unobtrusive appearance.

Available in **Black and White finishes**, the damper catch can be selected to coordinate with cabinet interiors and hardware schemes. Its durable construction ensures reliable performance in both residential and commercial environments where repeated use and consistent operation are essential.

Product Features

- **Damper catch for controlled door closing**
- Suitable for **heavy duty doors up to 40 kg**
- Provides **soft and quiet closing action**
- Compatible with **unsprung hinges or non-soft-close systems**
- **Compact design** for discreet installation
- Available in **Black and White finishes**

Product Benefits

- Reduces noise from door closing
- Protects cabinets and hinges from impact damage
- Improves user comfort and overall cabinet experience
- Enhances longevity of cabinet hardware
- Allows flexibility in hinge selection
- Suitable for residential and commercial applications

Technical Characteristics

- Designed for heavy duty cabinet door applications
- Independent damper mechanism (non-integrated)
- Compatible with a wide range of hinge systems
- Surface or internal cabinet mounting depending on design
- Durable construction for repeated use
- Available in Black and White finish options

Applications

This damper catch is used in cabinetry where controlled, quiet closing is required, particularly for heavier doors. It is commonly specified in kitchens, wardrobes, office furniture and commercial joinery where doors are subject to frequent use. The damper is ideal for applications using unsprung hinges or where additional soft-close functionality is required, helping to improve durability, reduce noise and enhance the overall user experience.
