

Hawa Porta 60/100 Bottom Guide Set with Roller – For Wall Mounting

Variant code: 057.3128.171

A stable and precise sliding door system, the HAWA Porta 60/100 Bottom Guide Set. Specifically engineered for wall mounting, this roller-guided set is the professional's choice for maintaining a "clear threshold" while ensuring whisper-quiet, smooth door travel.

Product Overview

The HAWA Porta 60/100 Bottom Guide Set (Art. No. 057.3128.171) is a premium hardware component designed for wooden sliding doors. Unlike standard floor-mounted guides that require drilling into your expensive flooring, this wall-mounted solution attaches to the skirting or wall, making it ideal for spaces with underfloor heating or delicate floor finishes like marble, hardwood, or tile.¹

Key Features & Benefits

- **Precision Roller Technology:** Features a high-quality plastic roller that reduces friction, providing a significantly smoother glide than static friction-based guides.
- **Wall-Mounted Design:** Eliminates trip hazards and preserves the integrity of your flooring.
- **Universal Compatibility:** Works seamlessly with both HAWA Porta 60 (up to 60 kg) and HAWA Porta 100 (up to 100 kg) sliding systems.
- **Adjustable Fit:** The guide is adjustable to accommodate different door thicknesses, ensuring a rattle-free, "play-free" operation.
- **Durable Construction:** Built with a zinc-plated steel fixation plate and high-strength anthracite plastic components for long-term reliability.

Technical Specifications

Specification	Detail
Manufacturer	Hawa Sliding Solutions
Article Number	057.3128.171
Material	Plastic (Anthracite) /

Specification	Detail
Mounting Type	Steel (Zinc-plated) Wall-mounted (ideal for clear thresholds)
Door Capacity	60 kg (132 lbs) to 100 kg (220 lbs)
Adjustability	Side-to-side adjustment for perfect alignment
Components Included	Bottom guide with roller, fixation plate, M4x8 countersunk screws

HAWA Roller Guide vs. Standard Floor Guides

When choosing hardware for a high-end interior, the guide system makes the difference between a "DIY" feel and a professional installation.

Feature	HAWA Porta 60/100 Wall Roller	Standard "U-Channel" Floor Guide
Floor Impact	Zero (Wall Mounted)	Requires drilling into the floor
Noise Level	Silent (Rolling action)	Potential "scraping" sound (Friction-based)
Aesthetics	Hidden under the door	Often visible and collects dust
Longevity	High (Reduced wear on door groove)	Moderate (Higher friction wear)

Frequently Asked Questions (FAQs)

1. Do I need a floor groove for this guide?

Yes. While the guide mounts to the wall, the roller typically travels within a 12mm x 16mm (Width x Depth) groove routed into the bottom of the wooden door. This keeps the guide completely invisible.

2. Can this be used for glass doors?

This specific set (057.3128.171) is designed for wooden doors. For glass sliding systems, Hawa offers specialised glass guides (e.g., Art No. 053.3191.901) that include plastic sliders to protect the glass surface.

3. Is this guide suitable for "Pocket Doors"?

Absolutely. It is the preferred choice for pocket door installations where floor access inside the wall cavity is restricted.

Installation Tip

For doors wider than 1200 mm, HAWA recommends using a continuous bottom guide rail in conjunction with this roller set to ensure maximum stability across the entire travel distance.²

Would you like me to find the specific routing dimensions for the door groove or a list of compatible top tracks for this system?

What Are Floor Guides and How Do They Work

This video explains the fundamental role of floor guides in sliding door systems and how they prevent door swaying, which is essential for understanding why a high-quality roller guide like the HAWA Porta is necessary.
