

Hawa Porta 60/100 HC/HMD Set Limiter – For Wooden and Aluminium Fascia

Variant code: 057.3126.071

Set Limiter for Wooden and Aluminium Fascia |
Hawa Porta 60/100 HC/HMD

The Hawa Porta 60/100 HC/HMD Set Limiter (Art. No. 057.3126.101) is a critical precision component designed for high-end sliding door systems. Specifically engineered for use with wooden and aluminium clip-on panels (fascias), this limiter ensures that the decorative covers remain securely positioned during the door's operation, providing a seamless, rattle-free aesthetic.

Whether you are installing the Hawa Porta 60 for residential closets or the Hawa Porta 100 for heavy-duty commercial room dividers, this set limiter is the "invisible" essential that maintains the structural integrity of your fascia.

Key Features and Benefits

- **Universal Compatibility:** Works seamlessly across the Hawa Porta 60 and 100 series, including HC (Height Comfort) and HMD (Minimalist Design) variants.
- **Dual Material Support:** Expertly secures both aluminium clip-on panels and custom wooden fascias.
- **Enhanced Stability:** Prevents the fascia from shifting or vibrating against the running track, extending the life of the hardware.
- **Swiss Engineering:** Manufactured to the highest standards of precision, ensuring a perfect fit with Hawa's signature low-profile tracks.
- **Discrete Design:** Once installed, the limiter remains hidden, preserving the clean, minimalist lines of your interior sliding doors.

Technical Specifications

Feature	Details
Product Number	057.3126.101
Compatible Systems	Hawa Porta 60 HC, 60 HMD, 100 HC, 100 HMD
Application	Securing wooden and aluminium panels/fascias

Feature	Details
Material	High-grade reinforced synthetic / metal components
Door Weight Class	Up to 60 kg (132 lbs) or 100 kg (220 lbs)
Installation	Tool-less clip-on or screw-fix (depending on fascia type)

Why Choose Hawa Porta over Standard Competitors?

When comparing the Hawa Porta 60/100 system to "standard" hardware-store sliding kits (like generic stainless steel rail kits), the differences in performance and detail are significant:

Noise Reduction: Standard stoppers often use hard plastic that "clacks" upon impact. Hawa limiters and stoppers are designed with dampening properties to ensure a silent close.

Aesthetics: Most competitors leave the track and brackets exposed. The Hawa HC/HMD system is designed specifically for clip-on fascia integration, which these set limiters facilitate.

Longevity: Hawa systems are tested for over 100,000 cycles (roughly 25 years of use). Standard kits typically fail at the 20,000-cycle mark.

Frequently Asked Questions

Q: Do I need this set limiter if I am not using a fascia? **No.** This specific limiter is designed to stabilize the decorative wooden or aluminium panel that covers the track. If you are using a flush-mounted ceiling track without a clip-on panel, this part is generally not required.

Q: Can I use this with the Hawa Porta Black Edition? **Yes.** While the limiter itself is often concealed, it is fully compatible with the Black Edition tracks and fascias.

Q: How many limiters come in a set? Standard sets usually include the necessary quantity for one door leaf (typically two units). Check your specific hardware kit manifest, as the Art. No. 057.3126.101 refers to the specific component used in these assemblies.

Q: Is this compatible with glass doors? This specific limiter is for the H (Wood) and Aluminium

fascia variants. For glass systems (Hawa Porta 100 G/GWF), different specialised fittings are required.
