Maintenance Wax - 100ml

Variant code: 33002

To ensure the finish on your beeswax product always remains at its best, we would advise re-coating your product with our maintenance wax from time to time.

This adds further protection to the metal and helps to prevent any rust or white blooms forming.

Our beeswax finish is the most authentic finish for steel. After forging, the colours left in the steel range from blue to deep red ochre. To preserve these beautiful colours, our beeswax products are dipped into hot beeswax. This gives a subtle, matt richness to the metal and offers excellent protection when the products are fitted internally and properly maintained. An extremely natural finish and a far softer alternative to a black powder coated finish.
