Blum Aventos Top Cover Cap Set - Suitable for HL/HF/HS Lift Systems - Dark Grey

Variant code: 22.8000DG

Blum AVENTOS HL Lift System - Top Lift Mechanism Servo-Drive Compatible is designed to deliver smooth and controlled lift-up motion for cabinet doors in overhead storage applications. Manufactured by **Blum**, a globally recognised specialist in cabinet motion technology, this mechanism forms part of the AVENTOS HL system, providing reliable performance and precise movement in modern cabinetry.

The lift mechanism enables cabinet doors to move vertically upwards, positioning the door above the cabinet opening to create clear and unobstructed access to internal storage. Its **Servo-Drive compatibility** allows integration with Blum's electrical opening system, enabling handle-less operation where doors open with a light touch and close with controlled damping. This supports contemporary furniture design while maintaining ease of use.

Engineered for consistent motion and stability, the mechanism balances the cabinet front weight to ensure smooth opening and closing. It also allows doors to remain securely positioned at any opening angle, improving accessibility and safety during use. Designed for integration with the full **AVENTOS HL system**, it works in conjunction with arms, brackets and accessories to deliver reliable long-term performance.

Product Features

- Designed for **Blum AVENTOS HL lift systems**
- **Top lift mechanism** for vertical door movement
- **Servo-Drive compatible** for handle-less operation
- Smooth and controlled lift-up motion
- Supports stable positioning at any opening point
- Suitable for a wide range of cabinet front sizes
- Precision-engineered for consistent performance

Product Benefits

- Improves access to overhead cabinet storage
- Enables clean **handle-less cabinet design**
- Enhances user comfort with assisted opening
- Ensures smooth and controlled door operation
- Provides stable and secure door positioning
- Integrates seamlessly within Blum lift systems

Technical Characteristics

- Designed for use with **Blum AVENTOS HL system components**
- Compatible with **Servo-Drive electrical opening system**
- Requires matching lift arms and fixing components
- Engineered for precise installation and adjustment
- Suitable for standard overhead cabinet configurations
- Durable construction for long-term reliability

Applications

This lift mechanism is intended for **overhead cabinet installations** in kitchens, storage units and fitted furniture where lift-up doors are used. The **AVENTOS HL system** allows cabinet fronts to move vertically upwards, creating unobstructed access to the cabinet interior. With **Servo-Drive compatibility**, it is particularly suited to modern handle-less cabinetry in residential and light commercial environments where smooth motion, reliability and clean design are essential.
