Blum Aventos HL Top Lever Arm Set - Lift Up - Cabinet Height 300-339mm

Variant code: 22L3200

Blum AVENTOS HL Lift System - Top Lever Arm Set Lift-Up is designed to guide and control the vertical lift motion of cabinet fronts within the AVENTOS HL system. Manufactured by **Blum**, a globally recognised specialist in cabinet motion technology, this lever arm set works in conjunction with the lift mechanism to ensure smooth, stable and synchronised door movement in overhead cabinet applications.

The lever arm set enables cabinet doors to move vertically upwards, positioning the front above the cabinet opening to provide unobstructed access to stored items. This motion is particularly suited to modern cabinetry where clean access and ergonomic use of overhead storage are essential. The design ensures controlled movement throughout the opening cycle, supporting consistent performance and accurate door alignment.

Engineered for integration within the **AVENTOS HL lift system**, the lever arms ensure both sides of the mechanism operate in coordination, maintaining balanced movement and preventing misalignment. The system allows cabinet doors to remain securely positioned at any opening point, improving usability and safety. Precision construction ensures reliable long-term operation across repeated use.

Product Features

- Designed for **Blum AVENTOS HL lift systems**
- **Top lever arm set** for vertical lift-up motion
- Supports smooth and controlled door movement
- Enables unobstructed access to cabinet interiors
- Ensures synchronised operation of lift mechanisms
- Suitable for defined cabinet height ranges
- Precision-engineered for consistent performance

Product Benefits

- Improves accessibility to overhead cabinet storage
- Supports clean and ergonomic cabinet design
- Maintains stable and balanced door movement
- Enhances overall lift system performance
- Ensures accurate door alignment during operation
- Integrates seamlessly within Blum lift systems

Technical Characteristics

- Designed for use with **Blum AVENTOS HL lift mechanisms**
- Specified for **cabinet height 300-339 mm**
- Ensures synchronisation between lift system components
- Engineered for precise installation and adjustment
- Compatible with standard AVENTOS HL configurations
- Durable construction for long-term reliability

Applications

This lever arm set is intended for **AVENTOS HL lift-up cabinet systems** used in kitchens, storage units and fitted furniture where compact overhead cabinets are installed. It enables smooth vertical door movement and ensures stable operation within the specified cabinet height range. The component is essential for maintaining synchronised motion, accurate alignment and reliable performance in modern cabinetry applications.

Property	Value
Finish	Nickel Plated
Material	Steel
