Blum Aventos HS Top Lift Mechanism Set - Servo-Drive Compatible - Cabinet Height 480-660mm

Variant code: 22S2500

Blum AVENTOS HS Lift System - Top Lift Mechanism Servo-Drive Compatible is designed to provide smooth and controlled lift-up motion for large cabinet fronts in overhead storage applications. Manufactured by **Blum**, a globally recognised leader in cabinet motion technology, this lift mechanism forms part of the AVENTOS HS system, delivering reliable performance, precise movement and enhanced user convenience in modern cabinetry.

The mechanism enables cabinet doors to open in a sweeping motion above the cabinet, creating clear and unobstructed access to internal storage. Its **Servo-Drive compatibility** allows integration with Blum's electrical opening system, enabling handle-less operation where doors open with a light touch and close softly with controlled damping. This supports contemporary furniture design while maintaining high levels of functionality and user comfort.

Engineered for larger and heavier cabinet fronts, the lift mechanism provides balanced motion and stable positioning throughout the opening cycle. The system ensures that doors remain securely in place at any opening position, improving accessibility and safety. Designed for seamless integration with the full **AVENTOS HS system**, the mechanism works in conjunction with arms, fixing brackets and accessories to deliver consistent and reliable performance.

Product Features

- Designed for **Blum AVENTOS HS lift systems**
- **Top lift mechanism** for upward-opening cabinet fronts
- **Servo-Drive compatible** for handle-less operation
- Smooth and controlled opening motion
- Supports stable positioning at any opening angle
- Suitable for large and heavy cabinet doors

- Precision-engineered for consistent performance

Product Benefits

- Provides easy access to overhead cabinet storage
- Enables modern **handle-less cabinet design**
- Enhances user comfort through assisted opening
- Ensures smooth and controlled door movement
- Supports safe and stable door positioning
- Integrates seamlessly within Blum lift systems

Technical Characteristics

- Designed for use with **Blum AVENTOS HS system components**
- Compatible with **Servo-Drive electrical opening system**
- Requires matching lift arms and fixing brackets
- Engineered for precise installation and adjustment
- Suitable for wide and tall cabinet configurations
- Durable construction for long-term performance

Applications

This lift mechanism is intended for **overhead cabinet installations** in kitchens, storage units and fitted furniture where large cabinet fronts are used. The **AVENTOS HS system** allows doors to open upward and out of the way, creating clear access to the cabinet interior. With **Servo-Drive compatibility**, it is particularly suited to handle-less cabinetry in modern residential and light commercial environments where ease of use, smooth motion and clean design are essential.
