Blum Vanetos Distance Bumper - 8mm Diameter - 2.1mm Height

Variant code: 993.0830

Blum Distance Bumper is a simple yet essential component designed to improve the performance and longevity of cabinet doors by providing a cushioned contact point between the door and cabinet carcass. Manufactured to complement Blum's cabinet hardware systems, this **self-adhesive buffer** helps absorb impact during closing, reducing noise and protecting cabinet surfaces from wear over time.

Installed directly onto the cabinet or door surface, the bumper creates a consistent spacing point that prevents hard contact between materials. This is particularly important in cabinetry where hinges without integrated soft-close are used, or where additional damping is required to support door closing performance. Its discreet design ensures it does not interfere with cabinet aesthetics, making it suitable for both visible and concealed applications.

The adhesive backing allows for quick and straightforward installation without the need for additional fixings or tools. Once applied, the bumper remains securely in place, providing reliable cushioning throughout repeated use. It can also be used to fine-tune door positioning and reduce vibration or movement in lightweight cabinet doors.

As part of Blum's wider system approach, the distance bumper supports consistent cabinet operation by protecting surfaces and maintaining controlled door closure. Its durable material construction ensures long-term performance in both residential and commercial environments.

Product Features

- **Self-adhesive fixing** for quick installation
- Provides a **cushioned contact point** for cabinet doors
- Reduces **impact noise** during door closing
- Protects cabinet surfaces from wear and marking
- Compact and discreet design

- Compatible with a wide range of cabinet constructions
- Suitable for use alongside Blum hinge systems

Product Benefits

- Minimises noise from cabinet door closing
- Helps protect cabinet finishes from damage
- Improves overall cabinet longevity
- Supports smoother and more controlled door contact
- Quick to install without specialist tools
- Maintains a clean and unobtrusive appearance

Technical Characteristics

- Peel-and-stick installation on clean, dry surfaces
- Positioning should align with door contact points
- Can be used on cabinet carcass or door surface
- Suitable for use with non-soft-close hinge systems
- Requires firm pressure during application for optimal adhesion
- Periodic inspection recommended to ensure continued performance

Applications

Blum Distance Bumper is used across a wide range of cabinetry applications including kitchens, wardrobes, office furniture and fitted storage. It is particularly useful in cabinets where hinges do not include integrated soft-close, or where additional impact protection is required. The bumper helps reduce noise, protect surfaces and maintain consistent door contact, making it a practical addition to both residential and commercial furniture installations.
