

Euro Profile Cylinder – 6 Pin – 35mm (Key) / 35mm (Key) – Under Master Suite – Key to Differ – Antique Brass

Variant code: CYF77270AB

Euro Profile Cylinder – 6 Pin – 35/35mm Key/Key – Under Master Suite – Key to Differ – Antique Brass

Secure your property with classic elegance and reliable performance using our Euro Profile Cylinder in a beautiful Antique Brass finish. This 6-pin cylinder offers robust security, designed for seamless integration into your existing door hardware. With its **35mm (Key) / 35mm (Key) configuration**, it provides convenient key access from both sides of the door, making it ideal for a wide range of residential and commercial applications.

Key Features & Benefits:

- **Robust 6-Pin Mechanism:** Experience enhanced security against picking and manipulation. Our high-quality 6-pin design offers a greater number of keying combinations, making it significantly harder for unauthorised entry.
- **Double Keyed (35mm / 35mm):** Enjoy the flexibility and control of key access from both the interior and exterior of your door. Perfect for front doors, back doors, office doors, and any application where dual-sided key operation is desired.
- **Under Master Suite Compatibility:** This cylinder is designed to be integrated into an existing master key system (under a master suite). This means it can be supplied as a "Key to Differ" cylinder, where each cylinder has its own unique key, while still allowing for potential future integration into a master key hierarchy if required by your locksmith. **Please note:** This cylinder is supplied as "Key to Differ," meaning each cylinder ordered will have its own unique set of keys.
- **"Key to Differ" Functionality:** Each cylinder comes with its own unique set of keys, ensuring individual security for each

door it's installed on. This prevents a single key from opening multiple doors unless specifically integrated into a master system later.

- **Elegant Antique Brass Finish:** Add a touch of timeless sophistication to your doors. The rich Antique Brass finish is not only aesthetically pleasing but also provides excellent resistance to corrosion and tarnishing, ensuring lasting beauty and performance.
- **Euro Profile Standard:** Manufactured to the widely recognised Euro Profile standard, ensuring compatibility with the vast majority of mortice locks and multipoint locking systems in the UK and Europe. This makes replacement or upgrade straightforward.
- **Durable and Reliable Construction:** Crafted from high-quality materials for long-term durability and consistent performance, even with frequent use.
- **Supplied with Keys:** Each cylinder includes a set of typically 3 keys for your convenience.

Ideal for:

- Residential Front Doors
- Back Doors
- Patio Doors
- Internal Doors Requiring Security
- Office Doors
- Commercial Properties
- New Builds & Renovations
- Security Upgrades
