

Gate Hooks To Build – Single Brick – Hot Dipped Galvanised

Variant code: GHBSB19G

Introducing the ultimate solution for robust and reliable gate installations: the **Gate Hooks To Build – Single Brick – Hot Dipped Galvanised**. This innovative product is engineered for seamless integration and maximum durability, ensuring your gates are securely and stylishly hung for years to come.

Built to Last, Designed for Simplicity

Forget the hassle of drilling and complicated fixings. Our Gate Hooks To Build are specifically designed to be embedded directly into the post brickwork as you build, creating an incredibly strong and stable anchor point. Simply place the hook between layers of bricks, and the weight and structure of your post will lock it firmly in place. This "no-fixings required" approach not only saves you time but also guarantees a cleaner, more professional finish.

Versatility and Strength Combined

Crafted to be universally compatible, these hooks work perfectly with both **straight and cranked hook and band hinges**. Whether you're hanging a heavy wooden gate or a custom-made metal one, our Gate Hooks provide the reliable support you need. The single-brick design ensures a snug fit, making them ideal for a wide range of brick sizes and wall thicknesses.

Hot Dipped Galvanised for Superior Protection

Durability is at the core of this product. Each gate hook is **hot dipped galvanised**, a process that coats the steel in a thick, protective layer of zinc. This robust coating provides exceptional **corrosion resistance**, safeguarding the hooks from rust, weathering, and the elements. From harsh winters to humid summers, you can be confident that your gate hooks will remain strong and functional, maintaining their integrity and performance over time.

Key Features:

- **Integrated Design:** Seamlessly embeds into brickwork during construction for a

permanent and strong anchor.

- **No Fixings Required:** Eliminates the need for drilling and screws, simplifying installation and enhancing structural integrity.
- **Universal Compatibility:** Works with both straight and cranked hook and band hinges.
- **Hot Dipped Galvanised:** Superior corrosion resistance for long-lasting performance and durability.
- **Single Brick:** Perfect for single-brick wide posts and various brick dimensions.
- **Heavy-Duty Construction:** Built to support a wide range of gate weights and sizes.
