

Slim Plaster-In Light Profile Aluminium inc White Push-on Diffuser – 2000mm

Variant code: LLP20500ALWT.2500

Slim Plaster-In LED Profile Aluminium with White Push-on Diffuser – 2000mm

Seamless, Modern, and Sleek Integrated LED Lighting

Transform your interior design with our **Slim Plaster-In LED Profile**. This 2-meter aluminium profile is engineered for a flawless, trimless finish, creating a stunning lighting effect that appears to emerge directly from your wall or ceiling. Perfect for achieving a high-end, minimalist aesthetic, this profile is a must-have for architects, interior designers, and DIY enthusiasts seeking to elevate their lighting projects.

Key Features & Benefits:

- **Invisible Integration:** Designed for plaster-in installation, this recessed LED profile becomes a seamless part of your drywall or plasterboard. The slim flange allows you to plaster directly over it, resulting in a clean, flush-mounted light channel with no visible aluminium.
- **Optimal Light Diffusion:** The included **white push-on diffuser** effectively eliminates the harsh "spotting" or "dotting" effect often associated with LED strips. It provides a smooth, uniform, and beautifully diffused light output, creating a soft ambient glow.
- **Premium Aluminium Construction:** Crafted from high-grade anodised aluminium, this LED channel acts as a superior **heat sink**, efficiently dissipating heat from your LED strip lights. This essential feature protects your LEDs, significantly extending their lifespan and ensuring consistent performance.
- **Easy Installation:** At 2000mm (2 metres) long, this profile is ideal for creating long, continuous light lines. The white push-on diffuser clicks easily into place, making both installation and maintenance a breeze.
- **Versatile Applications:** This recessed

aluminium profile is perfect for a wide range of indoor applications. Create stunning **cove lighting**, illuminate hallways, highlight architectural features, or add subtle ambient light to living rooms, kitchens, and bathrooms (with a suitably IP-rated LED strip).

Product Specifications:

- **Length:** 2000mm (2 metres)
- **Material:** Anodised Aluminium
- **Diffuser:** White Push-on / Frosted
- **Installation:** Plaster-in / Recessed
- **Internal Width:** Suitable for LED strips up to [insert max LED strip width, e.g., 10mm] wide.
- **Finish:** Anodised Aluminium

Why Choose Our Plaster-In LED Profile?

Say goodbye to bulky, visible light fixtures. Our Slim Plaster-In Profile offers a sophisticated and clean lighting solution that enhances the architectural lines of any space. It's the professional's choice for creating captivating, continuous light features that look built-in and bespoke.

(LED strip and end caps sold separately)
