

Slim Cabinet Hanger, No Holes in Cabinet to Adjust – Each

Variant code: AWH01000

I always like to describe this as an adjustable split batten, works really well when doing wall panelling as it gives excellent lateral adjustment with the benefit of height adjustment via an allen key. All adjustments are made on the rear of the bracket so no need for adjustment holes in the joinery. And with a capacity of 700 N (approx 71KG) its heavy duty too. Adjustable in two directions, height adjustment is done via Allen key from above (no need for holes inside the cabinet) Only 5mm thick. Excellent lateral adjustment. Anti-Release device. 700 N capacity. Sold Each.
