

Blum Aventos Tip-On Inline Adapter Plate – Long Version

Variant code: 956A1201

Blum AVENTOS TIP-ON Inline Adapter Plate is designed to enable the correct integration of **TIP-ON mechanical opening systems** within AVENTOS lift systems, allowing handle-less wall cabinet applications to operate smoothly and reliably. As part of Blum's AVENTOS system, this adapter plate ensures that the TIP-ON mechanism aligns correctly with the lift mechanism, delivering consistent push-to-open performance without compromising installation accuracy or long-term functionality.

Engineered for precision and compatibility, the adapter plate supports the seamless interaction between the lift system and the TIP-ON unit, ensuring that cabinet fronts respond correctly to applied pressure. This is particularly important in handle-less cabinetry, where reliable activation and controlled opening are essential for usability. Designed with Blum's system-based approach, the component integrates cleanly with other AVENTOS fittings, maintaining consistent installation standards across cabinetry projects.

Its compact form allows it to be discreetly installed within the cabinet assembly, without affecting the external appearance or internal usability of the cabinet. The adapter plate contributes to maintaining correct positioning and alignment of the TIP-ON mechanism, helping ensure consistent operation across repeated use. Built to Blum's durability standards, it supports long-term performance in both residential and commercial cabinetry applications.

Product Features

- Designed for use with **Blum AVENTOS TIP-ON lift systems**
- Enables correct positioning of **TIP-ON mechanical opening mechanisms**
- Supports reliable **push-to-open functionality**
- Compact inline design for concealed installation
- Ensures alignment between lift system and TIP-ON unit
- Compatible with Blum AVENTOS system components

- Manufactured to Blum system standards for durability

Product Benefits

- Enables clean **handle-less cabinet design**
- Ensures consistent and reliable door activation
- Improves installation accuracy within lift systems
- Supports smooth and predictable cabinet operation
- Maintains alignment between connected components
- Enhances long-term performance of TIP-ON systems

Technical Characteristics

- Designed for integration within **AVENTOS lift system configurations**
- Must be used with compatible **Blum TIP-ON mechanisms**
- Installed inline with lift system hardware
- Supports correct functional positioning of push mechanism
- Compatible with standard cabinet construction methods
- Requires accurate installation for optimal performance

Applications

This adapter plate is used within **AVENTOS lift system cabinetry**, particularly in **handle-less wall cabinets** where TIP-ON mechanical opening is specified. It is commonly applied in modern kitchens, fitted furniture and commercial interiors where clean design and push-to-open functionality are required. The component ensures that lift systems and TIP-ON mechanisms work together effectively, making it essential for achieving reliable operation in integrated cabinet systems.
